

## HOME IN OAK BROOK

**ENAMOGRIp ®**  
**JULY 2011**

8 million dollar home in Oak Brook. Over two thousand Sq. ft. of stone and marble. They tried using a penetrating epoxy last year but it yellowed and failed over the winter. This should last them 10 years. Base coat was thinned with 25 per cent MEK which penetrated the stone surface. Finish coat was two quick applications with fine sand cast on the first coat for traction control.
