

INSULATED TANK - KWANTLEN COLLEGE

Langley 1996

SUPERTHERM® Student-applied to a tank at Kwantlen's Agricultural Campus located in Langley, BC. These pictures were taken in 2004.

With no maintenance whatsoever the **SUPERTHERM**® is still insulating the tank with little or no deterioration in performance eight years later. This is because once cured **SUPERTHERM**® is impervious to moisture, unlike traditional wrap and clad or foam insulations which absorb moisture like a sponge.

Unlike traditional wrap and clad or foam insulations, there is also no deterioration of the tank itself from CUI (Corrosion Under Insulation). This is a known problem with all

bulk insulations.
